From education to business, in settings as diverse as the hospital room and the factory floor, mobile devices have transformed every organization. As tablet and Chromebook use increases, charging and storing dozens of high-value devices in limited space becomes a big headache and an even bigger security risk. Tripp Lite's tablet charging stations (USB) and Chromebook charging stations (AC) put an end to cable sprawl and missing assets. Each station organizes up to 48 tablets or 32 Chromebooks while providing high-speed charging, convenient syncing, secure storage and flexible deployment in a variety of settings.

HIGH-SPEED CHARGING

USB charging automatically matches each tablet's top charging speed, ensuring faster turnaround times and maximum availability of in-demand devices. AC charging works through standard outlets that allow you to plug in and charge all your Chromebooks at once. All the outlets and AC adapters are hidden from view during use, and cabling is neatly organized.

USB charging stations provide up to 2.4 amps (12 watts) per device, automatically matched to each tablet's top charging speed.

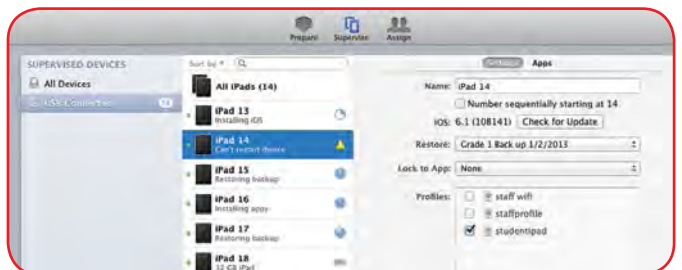

AC charging stations provide up to 12 amps (1,440 watts) total, with a standard AC power outlet for each device.

CONVENIENT SYNCING (Tablet Charging Stations Only)

Connect the USB uplink port to a host computer to sync connected devices. The sync function is perfect for updating software, backing up important data and returning tablets to standardized/authorized configurations after use. Wired syncing complements wireless functionality by providing high-speed, high-bandwidth device access and reducing congestion of busy Wi-Fi networks.

Connect the included USB cable to the sync uplink port and your computer. Cable access permits syncing while the cabinet is locked.

The sync uplink port allows you to configure, back up and restore tablets using software installed on your computer.

SECURE STORAGE

Locking Door and Side Panels
Sturdy Steel Construction

Tablets and Chromebooks represent a substantial investment, both in hardware and valuable data. A classroom equipped with tablets can easily represent more than $10,000 in hardware costs alone. Inside the charging stations, your devices are surrounded by steel. The door and side panels lock securely for controlled access without interfering with charging. Flow-through ventilation ensures that devices will not overheat, even while charging simultaneously.

FLEXIBLE DEPLOYMENT

Charging stations support several deployment options, including mounting or placement on a wall, desk, table, counter or floor. The optional mobile cart conversion kit (CSHANDLEKIT) adds a handle, rolling casters and power cord manager. Available in black or white, charging stations blend into a variety of classroom and office environments.

MOUNTS TO:
WALL

DESK

FLOOR

TABLET CHARGING STATIONS (USB)

- Secure and organize 16, 32 or 48 tablets, including iPad and Android models
- Provide syncing and high-speed USB charging (up to 2.4 amps per device)
- Mount to wall, desk, table, counter or floor, with support for mobile cart applications
- Prevent theft and tampering with locking steel door and side panels
- Provide flow-through ventilation to prevent devices from overheating while charging

All models available in black or white
